

PowerAutomateFlows

PowerAutomate Documentation

28/11/2022

Author: Manuel Portero Leiva

Introduction

This document has the purpose to explain different PowerAutomate Flows of Manuel Portero's collection; its code and functionalities, for understanding and replication purposes.

DataProvisioning_Flow

This Flow provision the users data via a graph attack and store the data in a Sharepoint list. It's an exercise about how you can generate data provisionings using powerAutomate.

ServiceDiagnostic_Flow

This Flow provision the health services data via a graph attack and analyze the status of all services. In case a service status is "serviceDegradation" triggers an email alert.

Minutes_Automation

This Flow receives the data of an adaptive card , populates a word template, store the word template in a sharepoint drive as a new file and send an email to the meeting assistant with the minute attached.

Email_Advising

This flow analyze the data of all the files in a sharepoint folder (need to be the same kind of excel file) and triggers an email alert if the payment column has a row bigger than 15

EmailProcessor

This flow archive the emails with special conditions in a sharepoint library.

Email_Archiving

This flow archive the emails with special conditions in a sharepoint List.

Email_DocumentCreationAndArchive

This flow analize the data of all the files in a sharepoint folder (need to be the same kind of excel file), populates a new word document and send a new email with the document attached if the column "Payment" has a row bigger than 15.
